motif_clust3 − GO:BP
aerobic respiration
cellular respiration
generation of precursor metabolites and energy
energy derivation by oxidation of organic compounds
oxidative phosphorylation
aerobic electron transport chain
respiratory electron transport chain
mitochondrial ATP synthesis coupled electron transport
ATP synthesis coupled electron transport
electron transport chain
proton transmembrane transport
transport
establishment of localization
response to unfolded protein
monoatomic cation transport
Golgi vesicle transport
endoplasmic reticulum to Golgi vesicle−mediated transport
establishment of localization in cell
mitochondrial electron transport, ubiquinol to cytochrome c
proton motive force−driven ATP synthesis
